A special thanks to Dahyun Ryu for character design and animations!

Story

After years of investigation, Gregor discovers that his long-lost sibling Sam has been transformed into a cyborg called S.A.M.S.A. and works in the underground factories of the big-tech corporation MEGA.

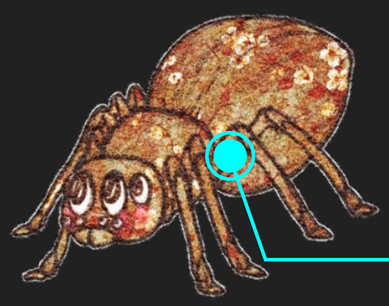

Maneuver Gregor on his quest to save his sibling as well as other trapped bugs and unveil the dark secrets of MEGA along the way.....

Meet Our Characters

S.A.M.S.A. (Sam?)

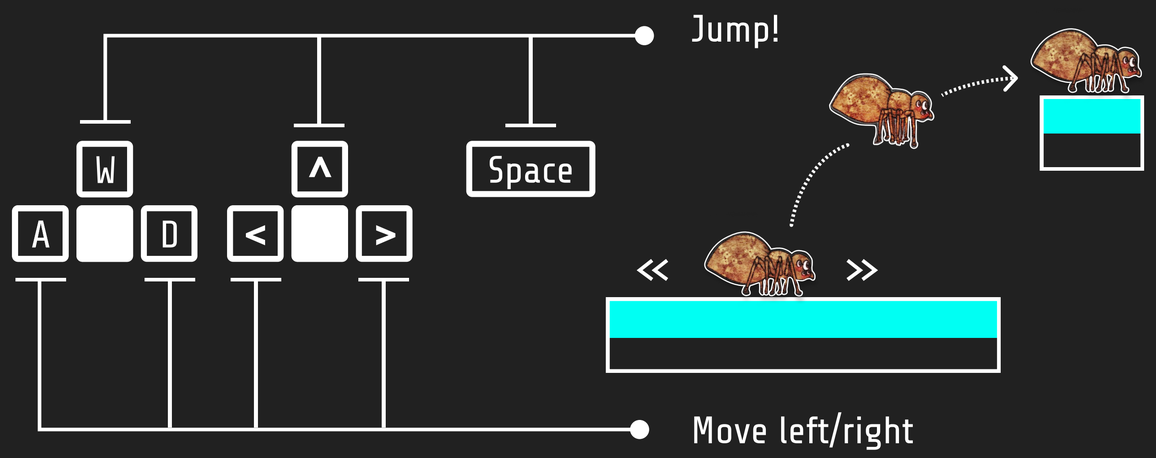

MEGA's latest cyborg model named "Software Analytics and Malfunction Solving Agent" who specializes in detecting and destroying system bugs -- but what are considered "bugs"?

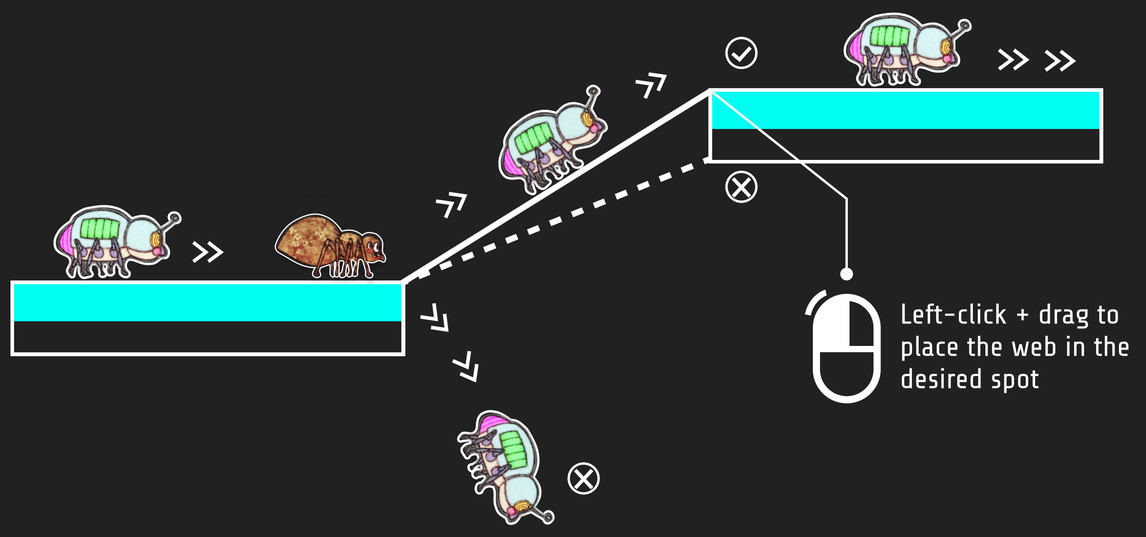

Gregor

A spider living in the backward underground region. Ever since his sibling Sam was employed by MEGA and disappeared, Gregor never stopped investigating Sam's whereabouts. He is an expert in knitting and produces the world's highest quality webs.

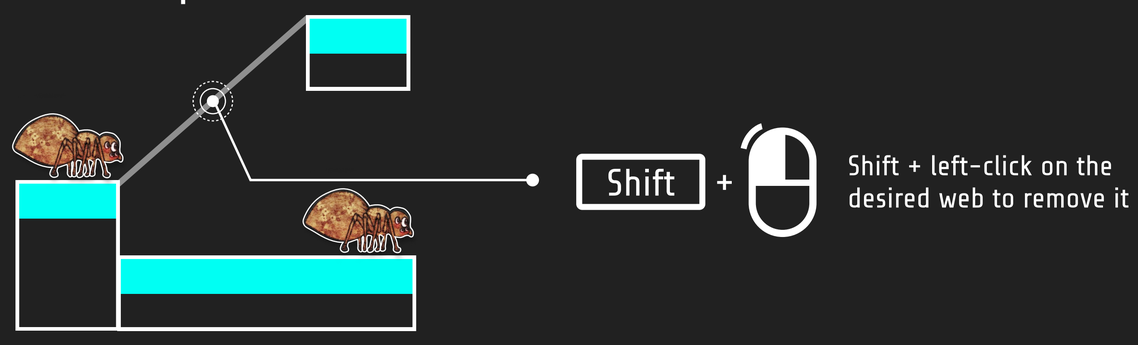

Gameplay and Controls [1]

S.A.M.S.A. can't jump -- this model is programmed to crawl ceaselessly forward and will only turn around when hitting a wall. To prevent S.A.M.S.A. from falling into the abyss, maybe Gregor's web can help...

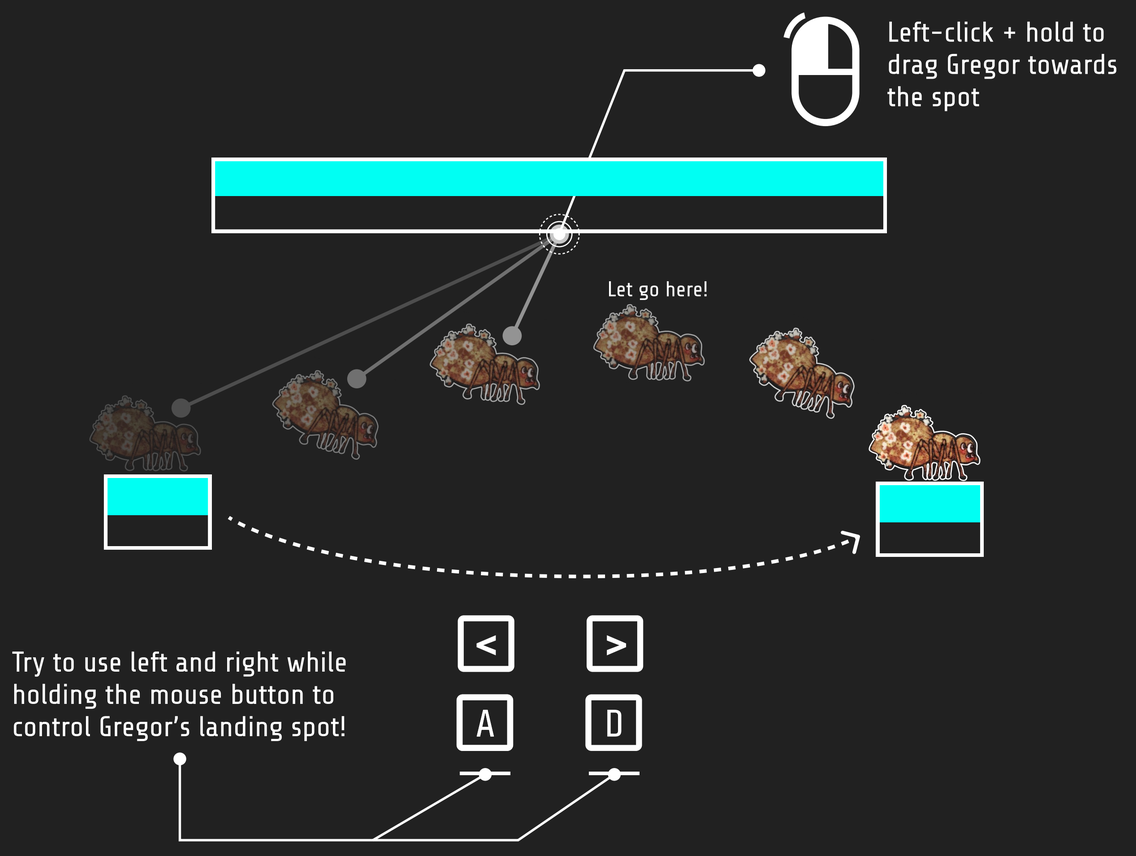

Meanwhile, webs can block movements! Sometimes Gregor needs to retrieve its web to be able to get to the next desired spot.

Gameplay and Controls [2]

Besides launching webs, Gregor can also use its web as a grapple to swing from one place to another.

To switch between Bridge Mode and Grapple Mode, hit TAB. The flower patterns on Gregor's abdomen will also change according to the mode!
